Assignment 2

- Describe your experience working (individually and with your team) on this assignment in a few sentences.

Thus far, I have enjoyed working on the presentations. Similar to my last reflection, I like how the prompts allow for a wide range of possible responses/solutions. Everyone's presentations, diagrams, and code will be very different. I always appreciate reading how my peers answer questions and solve problems in comparison to myself. I had to do some research to get a sense of how to complete a few of the prompts for this presentation. However, that is definitely a good thing as researching and learning can only help strengthen my skills as a developer. I liked working on this assignment and think I did some good work. I apologize for the late submission.

My breakout group is good. We work well together and are very friendly and helpful. We've been learning a lot from each other. Like the last presentation, we collaborated on this assignment to achieve better results. I think we all feel the same way about the success we've been having working together.
