Presentation 2

I had a good time working on this presentation. I incorporated the previous labs into the presentation we worked on at the start of the semester. I converted index.html to .php and used the code from the labs to render the tables in real time. Labs 1 and 2 went well for me thanks to the help of my team members. I was able to include the lab code in this presentation myself. My team members were around to help if I needed them, but I fared pretty well working on this presentation solo.

I answered some of the prompts for Presentation 2 on my theme park page.
